

NEWS BRIEF

Lumenal Lighting Chosen by City of Lakewood to Replace More Than 2,000 Streetlights

June 29, 2016

The city of Lakewood, Washington, selected Lumenal Lighting to help the City reduce energy consumption and improve safety. Lumenal performed an audit on the City's streetlight system to determine current energy and maintenance costs, identify projected energy savings and support potential grants and rebates to offset costs. Lumenal then developed the lighting design, installed demo lights, followed by full-scale installation.

To ensure satisfaction with the products to be selected, Lumenal installed a variety of lighting options for evaluation – enabling the City to experience and choose their preferred fixtures prior to full-scale installation. Lumenal then installed 2,075 energy efficient LED streetlights, featuring cobra heads, decorative bell and post tops. Optimal light levels were achieved and the City anticipates saving \$250,000 annually.

Tim Nash, Engineering Technician II for the City of Lakewood, Washington Public Works Department, expressed his appreciation of the Lumenal team's work. "We were very pleased with the professionalism of Lumenal's workers. They were very knowledgeable with both the LEDs and the electricity that the crew was working with, and always kept me informed no matter what time it was. This allowed us to keep the project moving forward."

For this project, Lumenal Lighting was proud to partner with Ameresco, a leading independent provider of energy efficiency and renewable energy solutions for businesses and organizations throughout North America and Europe.
